It will be passionate and interesting to learn drum and bass music using different techniques from Fruity Loops Tutorials.

The recent development on electronics media has opened wide scope on graphic designing, video games, film making, audio and video containing songs and music have inspired and encouraged many to take these fields as profession.

One can be able to make his or her music albums and films, by which the person can acquire, good name, fame and money. The important thing is that a person can fulfill his dream.

Is it not advisable for one to try with Frooty Loops Tutorial and know all the techniques with friendly and easy manner to create something new and fresh?

Learning Fruity loop 6 tutorial with the help of fruity loop:

Fruity loop is one of the best music production software and there are many fruity loop 6 tutorials available to learn the various features. If you are looking for a techno track, you have arrived at the right place and here you will find the basic information on fruity loop 6.

Actually the procedure begins with the loading drum samples and thereafter learning the technique of mastering the samples. Once you are able to master the technique, you will have to learn making pattern structures from them and finally learn mixing and automation melody with softsynth and exporting. You will have to go through step by step and will have to follow the tutorials.

Once a fruity loop 6 is installed in your computer, you can begin with the following tutorials. You should have some audio files located in your system at the root sample location. You will have to set up master effect channel so that you get good quality of sound at the time of final mastering. You can get these next to channel 8 through Fruity multiband compressor. You can have one more compressor from channel 7. Now you will need to have sound. Download the file Fb0205.bd from the left hand side of the fruity loop and click and select fill each 4 steps and press spacebar to play the sound.

Now patching of the sample in FX bay channel by bringing pattern maker window to channel setting window. This can be done by holding and dragging the horizontal lines on LCD panel of sample channel setting. You should bring and load more compressors, EQ's and multiband compressor to it. Now with a rolling kick you get the sound but the entire track cannot be made from a single kick. Give a second kick and punch and drag and drop the sample on to the clap and fill it with every 4 beats. So with multi kicks and kicks with punch, you can add some hats on these. You should ensure that the hats are given enough depth. You can find each and every measurement in details in the top left side of the fruity loops window and need to edit a file channel in menu.

Now you can add some more features. You can add pattern maker by dragging the sample Fb2016.Perc. It is just beneath the lat sample. You have to patch the FX channel and add one fruity delay bank to the bay. Thus by these simple fruity loop 6 tutorials you can add some techno track.

Although I have covered some fruity loop 6 tutorials in simple way and if you are looking for the detailed information on the fruity loop 6 tutorials, you should probably look out for either a mp3 file or a work or power point presentation on the subject.

Availability of Fruity loop beat tutorial for learning fruity loop music software:

Fruity loop is excellent music production software and if we look the availability for fruity loop beat tutorials in the market, these tutorials are available through many

resources. Some of the auction sites such as ebay are the best source for getting a Fruity loop beat tutorial. I have seen the tutorials are also available from Amazon and other websites also.

Many of the websites offer free downloads of these tutorial, however the quality of these tutorials is not up to the mark in all such cases. You need to have a complete look of the topics so that it is easy for you to learn the basics.

Here is the basic of the software Fruity Loops and after going through this basics you will be able create beats using input from your computer keyboard. Fruity Loop is easy to start and you have to load the software into step sequencer channel first. Here you have 16 pads at the right side that can be loaded by clicking on each pad through a MIDI controller. Similarly at the left side you have corresponding boxes for each pad and thus you have 16 boxes.

Now look at the top that displays the pad that you are editing and the corresponding sample loaded in it. You have the facility here to set the volume as well as pan of each individual pad sample and if you are interested to load a different or your favorite music you can load it by clicking the folder icon at the lower right and browse and load your specific choice. You will find three tabs at the top and these are marked as layer properties, mixer and pads. All the three tabs are important part of Fruity loops beat tutorials and learning and you will have to learn all the basic features associated with these tabs.

If we look at the basic functions of all the three important architectures of fruity loop bats, layer properties are important for setting different layers and sounds as per the velocity change requirement in particular beats. There you will find a detailed mechanism of setting the layers in specific layer properties tutorials available on either ebay or Amazon. The next most important tab is mixer that is also important for learning the volume fixing of each of the pad and further you will also have to acquire proficiency in other mixing functions.

The next tab pad allows you to record and mix the beats on your Fruity loop computer. It is really a tough task and you need to go through the tutorials available for learning operations of pads in details. Once you learn the mixing and recording and affective use of tabs the whole exercise becomes an easy job for you. So look out for an easy Fruity loop beat tutorial on the net and enjoy learning beats on your computer.
